A quieter way to read.

Octavo is a personal desktop PDF reader built for marked-up pages. Search the document, skim thumbnails, follow the outline, rotate and fit the page, then leave highlights, ink, and sticky notes that stay yours.

Try Find (Ctrl/Cmd+F) for the word annotation on page two.
Orange and black keep the focus on the page — warm, not loud.

Mark what matters.

Highlight a phrase you want to return to. Draw ink over a figure.
Drop a sticky note beside a claim that needs a second look.

This page mentions annotation so Find can light it up.
Continuous scroll keeps the thread of a long document in motion;
single-page mode keeps one sheet centered when you prefer stillness.

> *“Annotation is memory you can see.”*

> — Octavo sample

Your shelf, close at hand.

Recent files resume where you left off. Open several PDFs into the library, print when you need paper, and rotate a landscape sheet without fighting the viewport.

Outline bookmarks (this sample has them) jump you through chapters. Thumbnails along the side make long PDFs scannable at a glance.
