OCTAVO

A quiet place to read and mark your pages.

Reading in the margins

Octavo is named for a book format: a sheet folded three times, yielding eight leaves. The name is a nod to compact reading — attention kept close to the page.

On this page, try a highlight. Select a span of text with the highlight tool, then leave a sticky note for your future self.

Freehand ink is available for sketches, arrows, and emphasis. Annotations stay local on your machine; nothing is uploaded.

Zoom with the controls or pinch gestures. Pan when zoomed in. Turn pages with the navigator or keyboard arrows.

Beautiful tools should feel calm. Octavo aims for presence, not chrome — brand first, then the page, then your marks.

Persistence & packaging

Annotations are stored per document fingerprint in local browser storage during development, and in the app data directory when packaged with Tauri.

Targets: Linux and Windows, amd64 and arm64.
Build with: npm run tauri build

This sample PDF ships in public/samples/ so demos work offline without picking a file first.

Welcome to Octavo. Open a page. Leave a mark.
